Recent Projects

MERN Stack - Trader Among Us

- Socket.IO, JSON Web Tokens, Multer Image upload.
- Single Page Application that allows you to add and trade items among its users.

Python/Django – Audiophile

- Materialize CSS, PostgreSQL, theAudioDB API from Rapid API's, Songkick API.
- RESTful API full stack website that allows you to build and catalogue your own music collection. Used Python Requests to fetch album details from above API's.

MEN Stack – Activite's

- Materialize CSS, EJS for templating engine.
- A Task Scheduler CRUD application that allows you to create and assign tasks.

JavaScript Browser Game

- HTML, CSS, JavaScript
- A turn based battler..

Work Experience

2018-2020 – Freelance - Graphic Design

- Worked with multiple event management companies to deliver multimedia assets such as banners, videos, animations etc.

2016-2018 - Service Delivery – Etisalat Telecommunications

- Handling Survey and Scouting requests in the CRM pipeline in order to check customer readiness for service delivery.
- Designed a new template for the scouting reports, which reduced delay in service delivery by over 50% and helped reduce resurvey visits by over 80%.

2014-2016 – Broadcast IT Manager - Video Vision Media

- Procurement and Order placement & Inventory Management.
- Installation, Setup and Custom configuration for Broadcast Equipment.
- Successfully set up and ran multiple live events.
